MPSII patient and caregiver research information leaflet

About Just Worldwide: We are an independent research recruitment company and we recruit participants for healthcare research studies. The research studies we run are non-clinical and non-promotional and are mostly commissioned by pharmaceutical companies with new treatments and support programmes in development.

We are currently working on a research study relating to mucopolysaccharidosis II (MPSII) also known as Hunter syndrome. We are looking for patients and / or their caregivers to participate.

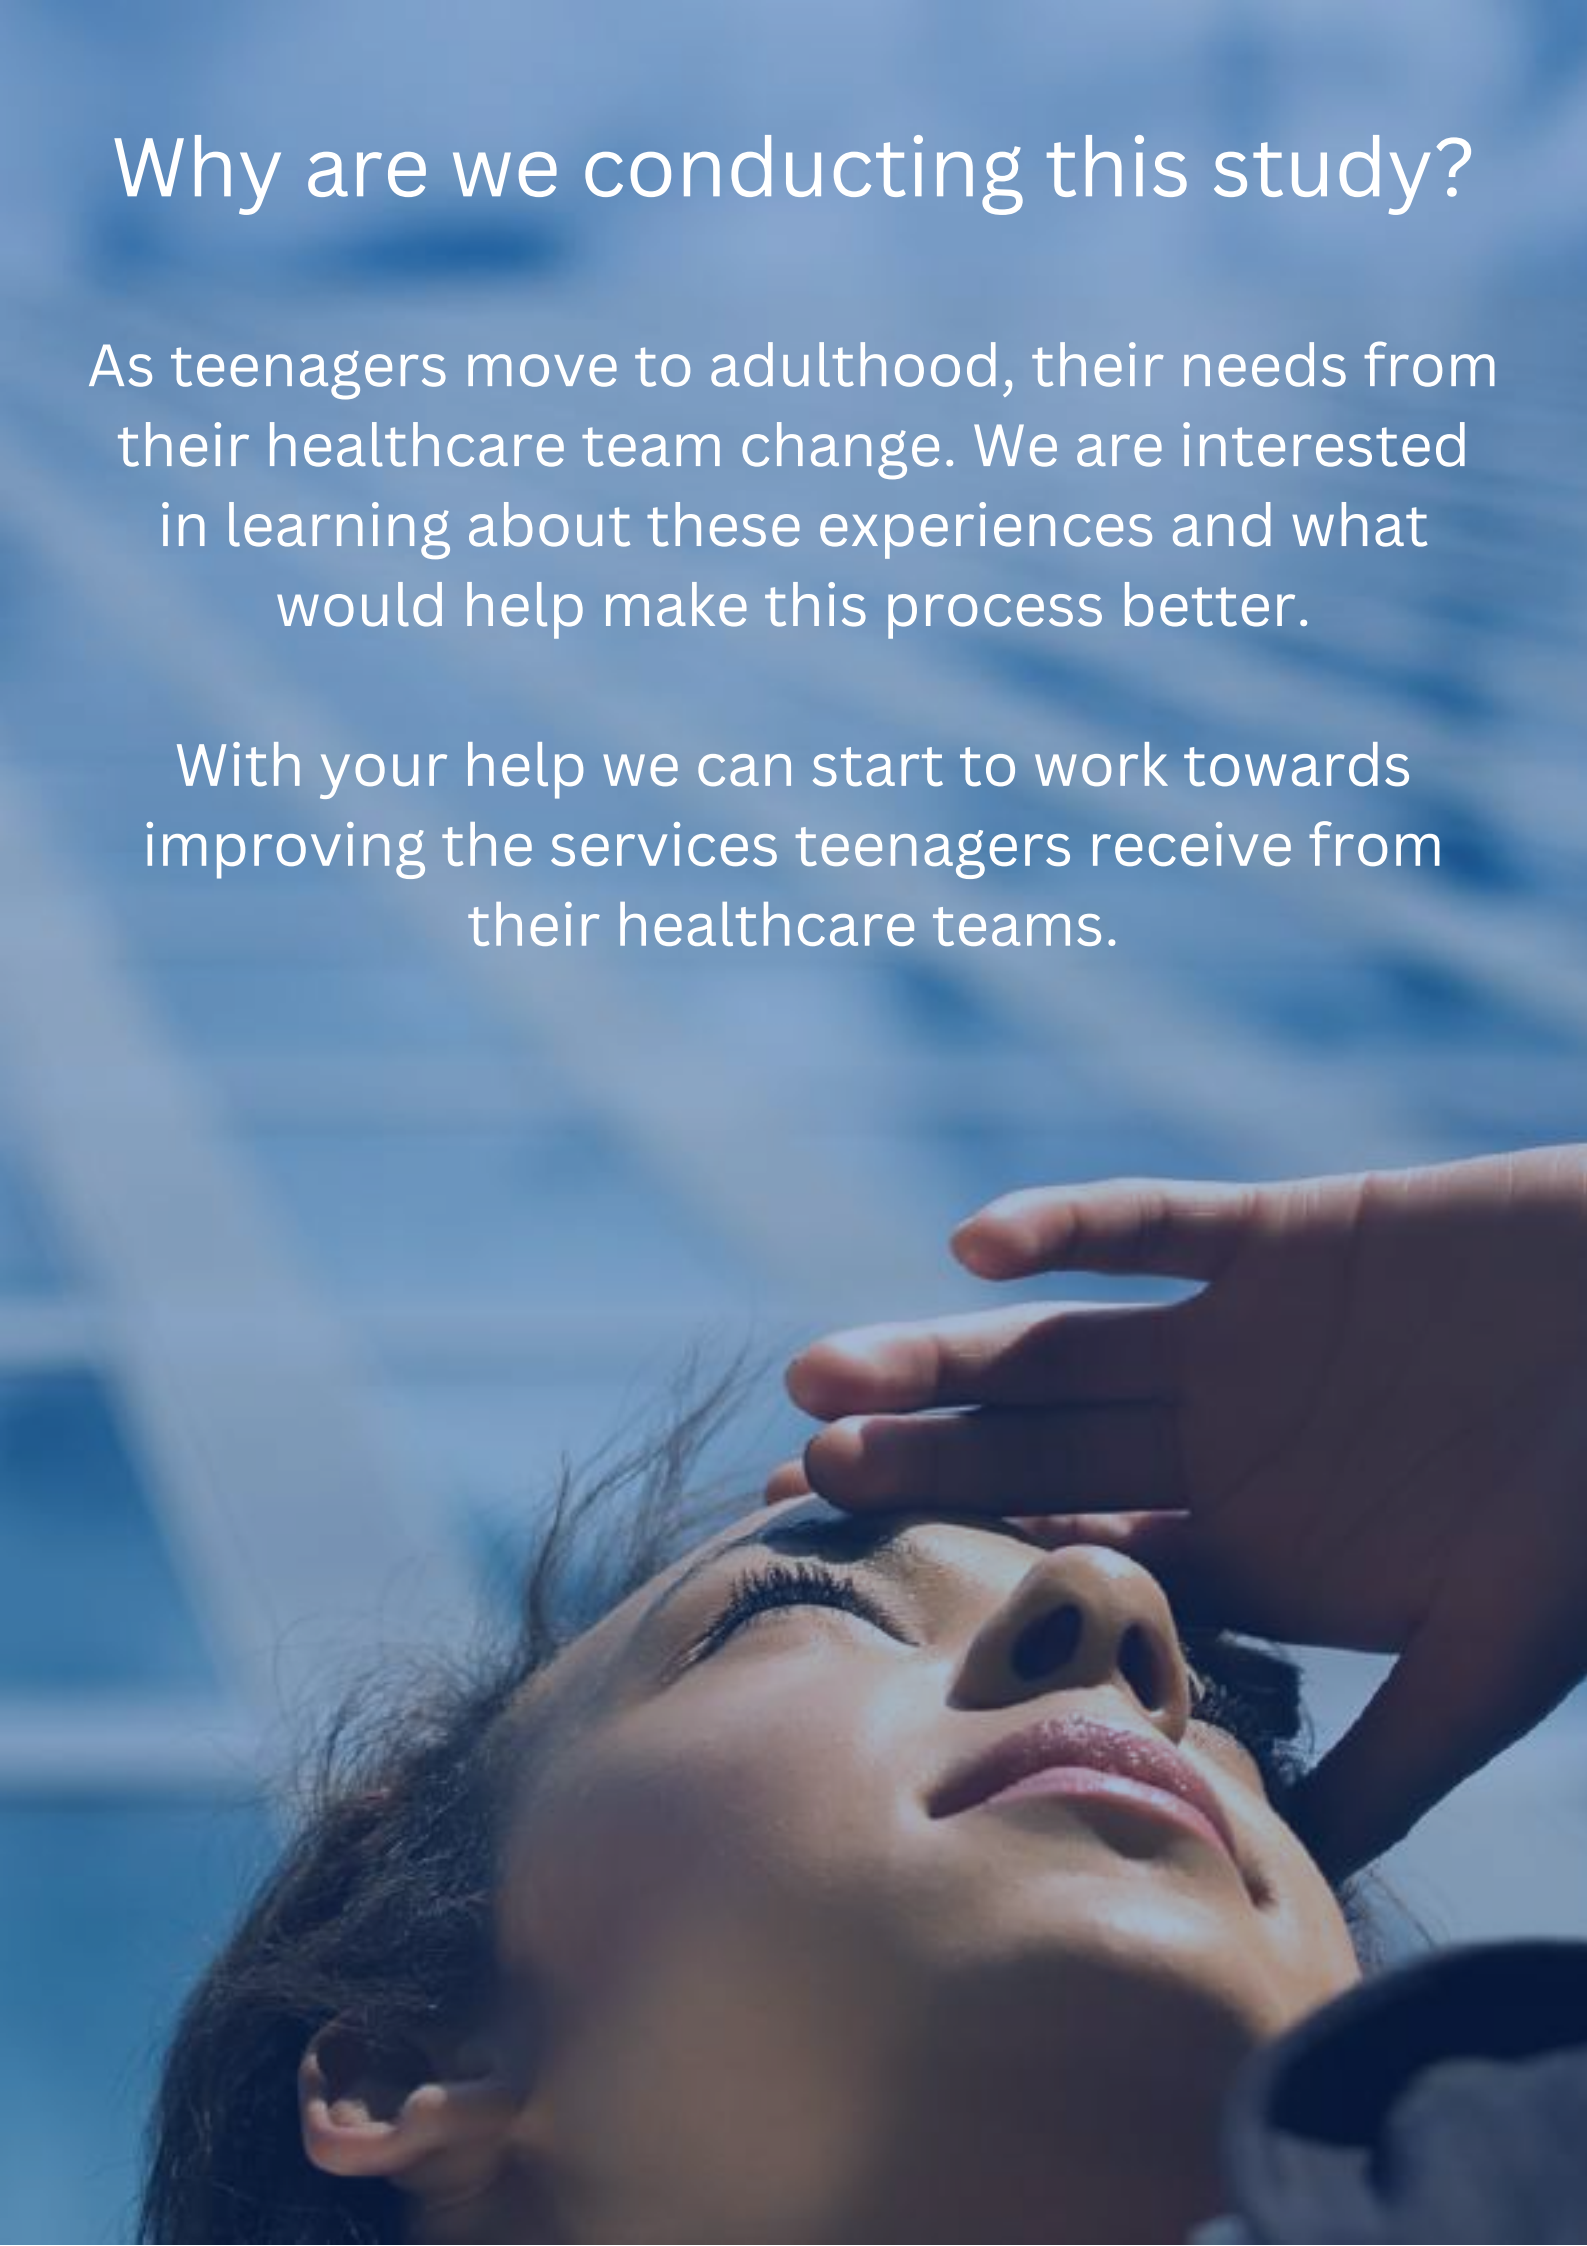

Who can take part?

- **Patients** (aged 18+ years) who have been diagnosed with MPSII
- **Caregivers** of a child aged 16 + and diagnosed with MPSII

Why are we conducting this study?

As teenagers move to adulthood, their needs from their healthcare team change. We are interested in learning about these experiences and what would help make this process better.

With your help we can start to work towards improving the services teenagers receive from their healthcare teams.

What will it involve?

A one-on-one interview via Zoom or phone lasting 30 minutes plus two short questionnaires. Total time expected is 40 - 50 minutes. In return, you will receive \$100 as a token of our appreciation

Your involvement in the research would be entirely voluntary and you would have the right to withdraw at any time. The research will observe and comply with all appropriate guidelines including General Data Protection Regulations. All information about you will be handled in confidence and the study findings will be fully anonymised.

For more information about how your data will be used please see our privacy notice, it is available at: <https://www.just-worldwide.com/privacy-policy>
